Notable Projects

Convolutional Neural Network // <https://github.com/Joekrry/ConvolutionalNeuralNetwork/>

- In preparation for my master's dissertation project, built an end-to-end pipeline to classify cognitive tasks from multichannel EEG signals, including preprocessing, training and evaluation.
- Designed a CNN architecture to extract spatial-temporal patterns.

Distributed Cloud Load Balancer // <https://github.com/Joekrry/DistributedCloudLoadBalancer/>

- Java based distribution cloud infrastructure simulator, file storage across docker containers.
- Encrypted, chunked and distributed files across four servers using scheduling algorithms
- Dual Database setup with MQTT-based host manager with dynamic scaling

Cover Letter Generator // <https://joekrry.github.io/CoverLetterGenerator/>

- Allows a CV and job description entry and generates a cover letter in seconds.
- Utilised React for the front-end façade while connecting to a postman backend via APIs.
- Hosted through GitHub pages for ease and convenience.
